DETAILED ACTION

Allowable Subject Matter

Claims 17, 18, 20, 60, 61, 70-74, and 81-83 are allowed.

The following is an examiner's statement of reasons for allowance: A method and apparatus for detecting leaks in a blood circuit whereby a first leak detector detects leaks by sensing blood located outside said blood circuit, where said outside is a non-wetted (i.e. normally dry) environment of said blood circuit, in combination with all other limitations of the various independent claims, is not disclosed nor deemed obvious in view of the prior art of record. All the various references found in the prior art utilized a sensor that was directly in the flow lines of the system (i.e. a wet environment) as they usually utilized light absorption of the fluid flowing through the system to determine if blood was present, as well known in the art at the present time.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The examiner has cited various references deemed relevant to the general state of the art of the present invention.
